R-Squared on Test Set: 0.8886354462786421
```

To – Do – 11 :

1.

The model's performance is acceptable and the cost function decreases smoothly indicating proper convergence. The RMSE value being around 5.28 shows that the prediction error is low and R-squared value of approx 0.89 indicates that the model explains most of the variance in writing marks. Therefore, the model neither underfits nor overfits the data.

2.

```
Learning rate: 1e-06  
Final Cost: 16.535602355147176  
RMSE: 5.856694748793876  
R2: 0.8629707528684534
```

```
Learning rate: 1e-05  
Final Cost: 13.150619992105618  
RMSE: 5.2798239764188635  
R2: 0.8886354462786421
```

```
Learning rate: 0.0001  
Final Cost: 10.26076310841341  
RMSE: 4.792607360540954  
R2: 0.908240340333986
```

According to the data above, as the learning rate increases from 0.000001 to 0.0001, the model shows improved convergence with decrease in final cost and RMSE and increase in R-Squared. Therefore, smaller learning rate results in slower convergence while moderate learning rate results in quicker convergence and is more effective but with bigger learning rate it might start to diverge.
